

Powering Construction Through Reliable IT

How The Right Tech Helps Fuel 2X Growth

WC Construction Company is a trusted Texas-based general contractor founded in 2006 with 40+ years of combined experience. They provide construction management and general contracting services for commercial, healthcare, and education projects, delivering quality results at every phase.

The Challenge

As WC Construction continued to grow, they needed an IT environment that could scale with the new hires, job sites, and increasing operational demands.

- **Scaling IT for Growth** – Rapid hiring and expanding project demands required systems that could support more users, devices, and locations without disruption.
- **Protecting Critical Business Data** – As reliance on digital tools increased, cybersecurity became essential to safeguard project files, financial data, and operations.
- **Minimizing Downtime in the Field** – With teams working across job sites and offices, even small IT issues could cause delays, impacting productivity.

The Solution

Divergys delivers responsive, dependable IT support and a security-first technology environment designed to help construction companies grow without disruption.

- **24/7 Support That Keeps Work Moving** – Help Desk coverage to resolve issues quickly and keep teams moving.
- **Cybersecurity Designed for Modern Construction** – Continuous protection, monitoring, and best-practice security measures to reduce risk and strengthen resilience.
- **Fast Fixes and Proactive Maintenance** – Quick troubleshooting and ongoing system management.

“From the very beginning, Divergys stood out as the best partner for us. They’ve been trustworthy every step of the way, and since working together we’ve more than doubled the size of our company. Having real peace of mind around our systems and cybersecurity has been invaluable so we can stay focused on what we do best: keep building.”
